

BIG CHANGES COMING SOON

We're bringing big changes to 5400 South that will benefit pedestrians, drivers and surrounding communities. Keep reading to find out about the changes and benefits we're working on.

1 ADDED TREES

To improve the look of 5400 South and the walking experience for pedestrians, the project is planting trees along some areas of 5400 South.

2 ADDED LIGHTS

To improve the look of the area and visibility for pedestrians, the project is installing lamp posts along some areas of 5400 South.

3 ADDED LANES

To improve traffic flow on 5400 South, the project is adding two travel lanes. As 5400 South connects with many north-south corridors like S.R. 111, the Mountain View Corridor, Bangerter Highway and Interstate 15, widening is necessary to accommodate current and projected 2040 traffic.

4 ADDED SHOULDERS

To improve safety along 5400 South, the project is adding three-foot shoulders that will provide a buffer between pedestrians and vehicles. The shoulders are also intended to provide an area for bicyclists to safely ride along 5400 South in a "Share the Road" situation.

5 IMPROVED DRAINAGE SYSTEM

To improve driver safety during wet weather, the project is adding new storm drains and two detention basins.

6 WIDER SIDEWALKS

To improve safety for pedestrians and the look of 5400 South, the project is widening the sidewalks from four feet to six-to-ten feet depending on the area. This will bring the sidewalks up to UDOT and Americans with Disabilities Act (ADA) standards.
